

ABSTRACT

Refrigerator housing including

an one-piece external housing made (6) from synthetic material; an internal housing (1) made (6) from synthetic material, which forms a cooling compartment and comprises an access opening (2); said external housing (6) and said internal housing (1) being in sealed manner connected to one another in the region of said access opening (2) on the front side, welded together or glued together in particular, and a hollow space (12) serving for isolation being formed between internal housing (1) and external housing (6); said external housing (6) on its rear side comprising an opening (11) through which essentially the entire hollow space is accessible for introducing isolation material.
